ONYX
INTELLIGENCE SYSTEMS

CAPABILITIES STATEMENT
NOVEMBER 2026

Private AI for your firm.

Onyx installs private AI that works with your firm's existing tools and knowledge.

> Your team controls access, review, and approval.

CORE CAPABILITIES

Install private AI

Set up local AI and supporting infrastructure, with agreed access and operating boundaries.

Connect existing tools

Connect the selected applications and desktop tools your team already uses.

Use the firm's knowledge

Search agreed documents and reference material, with supporting sources available for review.

Keep it running

Provide documentation, monitoring, backups, updates, and ongoing support.

PRIVATE AI IN PRACTICE

We operate a private AI system inside a regulated professional-services firm. It combines local AI, document search, and access to the firm's existing tools. We can discuss the architecture and representative workflows while keeping the reference anonymous and client data private.

ASSESS. PILOT. OPERATE.

01 Assess

Review your tools, knowledge, and access constraints. Agree the installation scope.

02 Pilot

Test the installation with agreed tools and knowledge. Review the results with your team.

03 Operate

Document the installation and train the team. Define ownership, support, and ongoing cost.
